

SUBHAM SATAPATHY

Playwright Automation Engineer | SDET | QA Automation

+91 977 6838389 • subhamsatapathy265@gmail.com • github.com/subham582 • linkedin.com/in/Subham-Satapathy

PROFESSIONAL SUMMARY

Detail-oriented Playwright Automation Engineer with hands-on experience delivering end-to-end test automation across UI, API, and cross-browser layers for enterprise clients in semiconductor and FMCG domains. Proficient in building scalable Page Object Model (POM) frameworks using Playwright with JavaScript/TypeScript, following BDD-aligned test structuring practices, and validating REST APIs against Swagger/OpenAPI specifications using Playwright APIRequestContext and Postman. Experienced in integrating test suites into CI/CD pipelines, owning test strategy and test plan documentation, and managing defect lifecycle within Agile/Scrum teams — with a solid understanding of modern automation tooling including Playwright's architectural advantages over legacy tools such as Selenium.

PROFESSIONAL EXPERIENCE

GyanSys Inc. | Playwright Automation Engineer

Jan 2025 – Present

Client: Applied Materials | Semiconductor Manufacturing | Apr 2025 – Jan 2026

- Owned end-to-end test automation for 4 enterprise web applications — delivered full E2E automation coverage for 2 applications, designed and executed a dedicated API-only test suite for 1 application, and provided functional UI coverage for 1 application, establishing the automation baseline from the ground up.
- Architected Playwright frameworks from scratch using JavaScript/TypeScript with the Page Object Model (POM) design pattern, structuring test scenarios in a BDD-aligned Given-When-Then format to improve test readability, stakeholder traceability, and onboarding speed for new team members.
- Built a standalone API testing suite using Playwright's APIRequestContext, validating REST endpoints against Swagger/OpenAPI specifications — covering schema validation, authentication flows, status code assertions, error handling, and edge cases; used Postman for exploratory API investigation and contract verification prior to automation.
- Automated 200+ test scenarios across smoke, sanity, regression, and end-to-end test types; achieved 85%+ regression coverage, reducing manual QA effort per release cycle by approximately 60%.
- Executed and validated cross-browser test coverage across Chromium, Firefox, and WebKit, ensuring application compatibility and consistent UI behavior across all supported browser environments.
- Integrated Playwright test suites into CI/CD pipelines via GitHub Actions and Jenkins, enabling automated execution on every pull request and enforcing pre-deployment quality gates — reducing build validation time by 40%.
- Configured Allure Report for detailed test execution reporting, providing pass/fail trend analysis, step-level screenshots, and failure logs to stakeholders and development leads after every pipeline run.
- Authored test strategy and test plan documentation covering scope, coverage goals, entry/exit criteria, and risk areas — serving as the QA reference for the development team and client stakeholders throughout the engagement.
- Contributed to internal knowledge-sharing sessions on Playwright's auto-wait mechanism, built-in assertions, and network interception capabilities, highlighting key advantages over Selenium-based approaches for the team's tooling decisions.
- Performed SQL-based backend data validation post-workflow execution to verify data integrity across microservices, supporting RCA and defect triage for data-layer defects.
- Managed full defect lifecycle in Jira — creating, triaging, assigning, retesting, and closing P1–P3 defects in collaboration with developers and BAs, maintaining 95%+ defect resolution within sprint SLAs.

Client: Unilever | FMCG / Consumer Goods | Jan 2026 – Present

- Currently engaged in the automation onboarding phase for a large-scale enterprise web application — conducting test scope assessment, automation candidate identification, and Playwright (TypeScript) framework setup from the ground up.
- Collaborating with the client's development and BA teams to map functional requirements to test coverage areas, define automation boundaries, and align test priorities to sprint release cycles.
- Applying BDD-aligned Given-When-Then test structuring to ensure scenarios are readable and reviewable by non-technical stakeholders during sprint ceremonies.
- Configuring cross-browser test execution across Chromium, Firefox, and WebKit in line with the client's browser support matrix, ensuring compatibility coverage from the first delivery milestone.

TECHNICAL SKILLS

Automation: Playwright (JS / TypeScript), Page Object Model (POM), Allure Report, TestNG, Selenium (aware)
Testing Types: End-to-End (E2E), API Testing, Cross-Browser, Regression, Smoke, Sanity, Functional UI, BDD (Given-When-Then)
API Tools: Playwright APIRequestContext, Swagger / OpenAPI, REST API Validation, Postman
CI/CD & Version Control: GitHub Actions, Jenkins, Git, GitHub, Bitbucket
Languages: JavaScript, TypeScript, SQL (Advanced), Python, Java
Defect & Project Mgmt: Jira (Defect Lifecycle), Agile/Scrum, Sprint-based QA Delivery
Cloud & Data: Azure Platform, Databricks, PySpark, SQLAlchemy, ADLS Gen2
Soft Skills: Test Planning, Stakeholder Reporting, RCA Documentation, Cross-Team Communication

CERTIFICATIONS

Databricks Lakehouse Fundamentals Accreditation	— Databricks	2024
Micro-Skilling Agile Webinar	— EY (Ernst & Young)	2024

ACHIEVEMENTS

- Solved 50+ advanced SQL challenges on LeetCode and DataLemur; earned 4-Star SQL badge on HackerRank — analytical skills applied directly to backend data validation in automation workflows.
- Led college basketball team to a campus-wide tournament victory — demonstrating leadership under pressure and cross-functional team coordination.

EDUCATION

Institute of Technical Education and Research	Nov 2021 – Jul 2025
B.Tech in Computer Science & Engineering CGPA: 8.13 / 10.0	
SVMNK	Mar 2019 – Jul 2021
CHSE (Class XII) 87.5%	
De Paul School	Aug 2008 – Mar 2019
ICSE (Class X) 88.86%
